

(Continued from back cover)

- SAEID ALIKHANI, YEE-HOCK PENG: *Chromatic zeros and generalized Fibonacci numbers* | 330–335
- QIU-MING LUO: *Some formulas for Apostol-Euler polynomials associated with Hurwitz Zeta function at rational arguments* | 336–346
- BIBIN K. JOSE, ZSOLT TUZA: *Hypergraph domination and strong independence* | 347–358
- S. ARUMUGAM, SITHARA JERRY: *Fractional edge domination in graphs* | 359–370
- BO ZHOU, IVAN GUTMAN: *More on the Laplacian Estrada Index* | 371–378
- SHENGBIAO HU: *A sharp lower bound of the spectral radius of simple graphs* | 379–385
- LETÍCIA R. BUENO, LUERBIO FARIA, CELINA M. H. DE FIGUEIREDO,
GUILHERME D. DA FONSECA: *Hamiltonian paths in odd graphs* | 386–394

Prepress and layout: Dobrilo Đ. Tošić

Publishers: University of Belgrade, Faculty of Electrical Engineering
Academic Mind, Belgrade

Printed: August 2009.

CONTENTS

- CAROLINE SWEEZY: *An extension of a norm inequality for a semi-discrete g_λ^* function* | 177–197
- ROMI F. SHAMOYAN, OLIVERA R. MIHIĆ: *On traces of holomorphic functions on the unit polyball* | 198–211
- BRIAN FISHER: *On the composition of the distributions $x_+^{-s} \ln^m x_+$ and x_+^μ* | 212–223
- DONAL O'REGAN: *Fixed point index for composite type maps* | 224–235
- AKBAR AZAM, MUHAMMAD ARSHAD, ISMAT BEG: *Banach contraction principle on cone rectangular metric spaces* | 236–241
- MARTIN BOHNER, TAHER S. HASSAN: *Oscillation and boundedness of solutions to first and second order forced functional dynamic equations with mixed nonlinearities* | 242–252
- LYNN ERBE, TAHER S. HASSAN, ALLAN PETERSON: *Oscillation criteria for first order forced dynamic equations* | 253–263
- ABBAS NAJATI, THEMISTOCLES M. RASSIAS: *Stability of homomorphisms and (θ, ϕ) -derivations* | 264–281
- E. BENDITO, A. M. ENCINAS, A. CARMONA: *Eigenvalues, eigenfunctions and Green's functions on a path via Chebyshev polynomials* | 282–302
- LANE CLARK: *Limit distribution of ascent, descent or exceedance length sums of permutations* | 303–309
- ROMAN WITUŁA, DAMIAN SŁOTA: *δ -Fibonacci numbers* | 310–329
