

(Continued from back cover)

- RUI A. C. FERREIRA, DELFIM F. M. TORRES: *Fractional h -difference equations arising from the calculus of variations* | 110–121
- CHRISTOPHER S. GOODRICH: *On positive solutions to nonlocal fractional and integer-order difference equations* | 122–132
- JOHN R. GRAEF, LINGJU KONG, FELIZ M. MINHÓS, JOÃO FIALHO: *On the lower and upper solution method for higher order functional boundary value problems* | 133–146
- CHENGJUN GUO, DONAL O'REGAN, RAVI P. AGARWAL: *Existence of multiple periodic solutions for a class of first-order neutral differential equations* | 147–158
- BESSEM SAMET: *Common fixed point under contractive condition of Ćirić's type in cone metric spaces* | 159–164

Prepress and layout: Dobrilo Đ. Tošić, Srđan M. Radovanović

Publishers: University of Belgrade, Faculty of Electrical Engineering
Academic Mind, Belgrade

Printed: March 2011.

CONTENTS

- STEVE KIRKLAND, DEBDAS PAUL: *Bipartite subgraphs and the signless Laplacian matrix* | 1–13
- ZIWEN HUANG, HANYUAN DENG, SLOBODAN K. SIMIĆ: *On the spectral radius of cactuses with perfect matchings* | 14–21
- J. W. SANDER, T. SANDER: *The energy of integral circulant graphs with prime power order* | 22–36
- SINGARAJ K. AYYASWAMY, SELVARAJ BALACHANDRAN, IVAN GUTMAN: *Upper bound for the energy of strongly connected digraphs* | 37–45
- BRUCE BATES, MARTIN BUNDER, KEITH TOGNETTI: *Self-matching bands in the paperfolding sequence* | 46–54
- KAMILLA OLIVER, HELMUT PRODINGER: *Words coding set partitions* | 55–59
- GERGŐ NEMES: *Expansion related to Somos' quadratic recurrence constant* | 60–66
- JAMES MC LAUGHLIN: *A new summation formula for WP-Bailey pairs* | 67–79
- HACÈNE BELBACHIR, DJAMEL BERKANE: *Asymptotic expansion for the sum of inverses of arithmetical functions involving iterated logarithms* | 80–86
- HORST ALZER, JÓZSEF SÁNDOR: *On a binomial coefficient and a product of prime numbers* | 87–92
- M. HEYDARI, S. M. HOSSEINI, G. B. LOGHMANI: *On two new families of iterative methods for solving nonlinear equations with optimal order* | 93–109
